AcuLift™ MicroPen

Microneedling Benefits

Microneedle treatment using an AcuLift™ MicroPen promotes natural production of collagen and elastin fibers responsible for skin structure and elasticity. As we age, these fibers break down causing wrinkles and sagging.

The AcuLift™

Microneedle pen utilizes extremely fine, sterile needles that penetrate the skin and stimulate collagen and elastin production without permanent injury to the skin. It can improve skin texture and color, reduce wrinkles, acne scars and dramatically enhance effectiveness of skincare products.

AcuLift™

Use your body's natural skin healing power to rejuvenate from the inside out!

What should I expect?

Before Treatment: If desired, topical anesthetic is applied before treatment to provide light numbing.

Gentle Treatment: Physician formulated, organic, vegan serum prepared for your skins individual needs will be applied. The AcuLift™ MicroPen is then used to create controlled microchannels, eliciting your body's healing response. This will remodel and rejuvenate your skin to provide a younger, more firm and radiant appearance.

Post Treatment: Following treatment your skin may appear pink or slightly red, similar to a mild sunburn. This typically disappears after 12-24hrs. You will receive a patient aftercare kit to accelerate your recovery and results.

Results: Are sometimes apparent after one treatment and will improve over a series of 3-6 monthly treatments. Results will continue to progress for several months after your last treatment. Results can last up to 5 years!

Organic skincare products
Natural solution
Little downtime
Improves the appearance of wrinkles on the face and neck
Safe for all skin types

Since 2006 AcuLift™ is a name you can trust with your skin health. Ask your provider if AcuLift™ MicroPen Treatment is right for you!
